Dear Reader,

ProdEngineer is a magazine of innovation in mechanical engineering technology, automation, process control technology, and the automotive industry. The aim of our publisher is to search and introduce the novelty on the market, informing the representatives of different industrial brands about the latest innovation, developments, giving a professional, technical, as well as engineering interpretation on the products and ideas of our Partners. Our readers represent the colour of engineering and automotive industry. Our columns are organised to deal with modernisation, researching, developing, furthermore introducing the new issues of engineering technology and science. One of our most important aims - like in the previous years is to acquaint and spread our journal among the students of technical higher educational institutions in order to support the new engineering generation and providing them with up-to date information on technology. The Edition for auditing serve the needs of both our advertisers and readers. We are open to the brand new creative ideas of innovation.

The ProdEngineer technical journal appears on the market with annual 6 issues. Additional 2 - 4 thematic releases available on material handling and logistics, surface cleaning technology and medical technology. Our columns are organized on modernization, research and development as well as engineering topics. Some of them: computer design, simulation, machining science and technology, welding, cutting and measuring, filtration, heating technology, industrial electronics, automation, professional specialist training. The online platform offers many opportunities for our partners in the news, expert articles, case studies, to accommodate banners, as well as to keep up with the latest trends in technology. Registered users have PDF access to the printed version of the published issues.

Andrea Weirach
